

VOTING SYSTEM AND METHOD FOR CREATING A DIVERSIFIED INVESTMENT FUND

ABSTRACT OF THE DISCLOSURE

5 A voting system and technique is disclosed for determining a selected subset of participants
from a plurality of candidates wherein each of the participants receive an equitable ownership
interest of an item in exchange for a contribution. According to the present invention, the
voting system and its method is used to select investors to participate in an investment
vehicle, wherein the investment vehicle characteristically has a potentially high venture
capital-type ROI ("return on investment"). The system and method optimizes asset
10 diversification to meet the needs of holders of large blocks of private equity.
